PROFESSIONAL SUMMARY

Computer Science undergraduate at RV Institute of Technology and Management (VTU), interested in building technology-driven products and solving real-world problems. Worked on collaborative academic and AI-focused projects involving web applications, recommendation systems, and digital language preservation. Passionate about learning new technologies and currently strengthening programming and web development fundamentals through hands-on, project-based learning. Seeking software development internship opportunities.

EDUCATION

Bachelor of Engineering, Computer Science and Engineering 2024 – 2028
RV Institute of Technology and Management (VTU), Bengaluru, Karnataka | CGPA: 7.8/10.0

Class XII (Pre-University) – Silicon City 2024

Class X – Delhi Public School (DPS) GBN | 80% 2022

PROJECTS

WatchWise – AI-Powered Movie Recommendation Web App 2026
Next.js, React, Node.js, Express.js, MongoDB Atlas, Hugging Face | Team of 3 | Demo: lnkd.in/dJeUYTRM | Repo: lnkd.in/d8PUBzkq

- Collaborated in a team of 3 on a full-stack web application that generates personalized and mood-based movie recommendations.
- Worked with the Mistral-7B language model via Hugging Face, and TMDb and OMDb REST APIs for detailed movie data.
- Project includes JWT user authentication, MongoDB Atlas storage, and a responsive UI built with Tailwind CSS and Framer Motion.

SwaraVeda – Digital Archive for Endangered Indian Dialects 2026 – Present
AI course final project | Speech Processing, NLP, Digital Humanities | Live: swara-veda.vercel.app

- Co-developed a community archive web platform to record, AI-transcribe, correct, and preserve endangered Indian dialects and oral traditions.
- Enabled community members to contribute stories, songs, and conversations in local dialects and review AI-generated transcripts.
- Applied speech processing and NLP concepts to build a searchable archive of audio recordings and transcripts; deployed live on Vercel.

Cloud Resource Allocation using Dynamic Programming 2026
Python, JavaScript, HTML, CSS | Team of 3 | Demo: lnkd.in/dP7yXyYk | Repo: lnkd.in/d4Kbwm49

- Collaborated to model cloud resource allocation (CPU, memory, storage) as a 0/1 Knapsack optimization problem, solved with Dynamic Programming to find the optimal allocation within budget constraints.
- Project includes an interactive web interface to configure a cloud budget, define workload tasks, and run the solver across simulated scenarios.

TECHNICAL SKILLS

Web Development: HTML, CSS (Basic)
Programming: JavaScript (Learning), Python (Learning), Java (Learning)
Tools: Git, GitHub, VS Code (Basic)
Concepts: Basic understanding of REST APIs, databases (DBMS), and AI-powered applications
Project Exposure (team projects): Next.js, React, Node.js, Express.js, MongoDB Atlas, Tailwind CSS, Hugging Face, JWT
Coursework: Data Structures and Algorithms, Analysis and Design of Algorithms, DBMS, Microcontrollers, Linear Algebra

CERTIFICATIONS AND TRAINING

Java Bootcamp Certificate – Infosys

Job Ready Cohort – Sheryians Coding School In progress
